Sandbox environment

Start your integration journey in a Sandbox environment that replicates the functionality present in the production environment to test payments, bank information access, etc.

Sandbox accounts are identical to production accounts for 99.9%. It's a completely separate instance with its own API keys and bank options. Once you have integrated Finexer, you can switch to the production environment by changing only API key on your end.

To create a Sandbox account, please log in to your [Finexer account](#), go to the right-hand

menu, click on your company name, click Create a new account, and check the box to indicate you wish to create a Sandbox account.

Sandbox banks (i.e. Orion) are available only in the sandbox Finexer account. Banks such as Barclays, HSBC, Santander and others, are available in live Finexer accounts.

Sandbox banks

There are several banks that can be used to emulate the production environment. You can find Sandbox banks with credentials in the [App](#) page in your account settings. Please visit our [API reference](#) for details on how to consume Finexer API.

Bank emulator - Orion

We built a bank emulator that gives you more control over data and enables you to:

Create a brand new Orion account that will have initial data for you to start testing it;
Reset an existing Orion account that will revert all changes have been made to the account;
Log in to Orion account that has its own dashboard with tabular reports of data on account.

Next steps

Please choose what you want to do next.
