Getting Started

Learn how to integrate with Finexer to accept payments, access thousands of bank accounts, and manage your business online.

We consistently update our documentation to offer a clear description of tools and features including step by step guides, and copy-and-paste code samples.

We always welcome new ideas. If you believe that our API is missing an important feature, or that our service needs to be more customisable to suit your needs, then drop us an email or contact the Support Center.

Choose what you'd like to do

Connect a Bank - access your client's bank account data.

Initiate a Payment - initiate and accept payments.

Connect a Finexer Account - manage other Finexer accounts, accept payments or access bank account data on behalf of other users.

Set up an App - configure your platform app.

Set up a Webhook - create and configure notifications when certain events happen in your account.

Use Sandbox - set up and and use bank emulator, Orion and others.

Manage your Team - manage your team members in your account.

Set up Bank Feed - set up an ongoing bank feed.
